

BELLUS MEDICAL'S COMMITMENT TO SAFETY

At Bellus Medical, patient safety is our number one priority. As the first microneedling device to be cleared by the FDA with a class II indication, SkinPen has put many safety measures in place to protect both practices and patients. After passing over 90+ validation tests while keeping patient safety top-of-mind, we have eliminated the possibility and worry of any cross-contamination. SkinPen Precision's patent-pending cartridge design inhibits the entrance of fluids into the device which along with the BioSheath and routine cleaning help to prevent potential cross-contamination of the SkinPen device between uses.

Precision Advanced Cartridge Unit

- The Precision Advanced Cartridge Unit has an ingress protection feature that prevents any cross-contamination from blood, fluid or serum present during the procedure from penetrating into the SkinPen handpiece.
- The single-use lockout feature eliminates the possibility of the cartridge being used multiple times and ensures that each patient is receiving a new cartridge at every procedure.
- 14 Medical grade stainless steel needles are a part of the Ethylene Oxide sterilized Precision Advanced Cartridge Unit.

SkinPen Precision Handpiece

- The ultrasonically sealed hand piece eliminates the risk of fluid transfer from the patient to the internal workings of the device.
- Additionally, the proprietary single-use, disposable BioSheath further eliminates the risk of fluid transfer by acting as a barrier to prevent cross contamination onto the SkinPen handpiece during the procedure. This ensures that any fluid generated during the procedure does not actually come into contact with the device.
